 **FiberCop**

**THE NETWORK OF THE FUTURE.
NOW.**

Our objectives

We would like to create an all-optical network throughout the domestic territory with ultra-fast connections that permit the diffusion of **digital services** aimed at supporting enterprises in strengthening their business and improving the quality of life of the citizens.

In this way we contribute to the growth of the country and to the **innovative and customised services** offered to favour the development of the **digital culture**, by adopting **low environmental impact** sustainable technologies.

We are creating the
network
of the future for the
digital development of
Italy, connecting
people, enterprises and
institutions.

Our services

HIGH CAPACITY ACCESS SERVICES

With high capacity access services the **Operators** can purchase passive fibre optic solutions (**FTTH**) to offer the final customer ultra broadband **voice and data services**.

DEDICATED ACCESS SERVICES

With dedicated access services, we propose point-to-point passive **connectivity solutions** that allow **dedicated band connectivity services** with high levels of network availability and **security** to be offered.

INFRASTRUCTURAL SERVICES

With infrastructural services we can **access pipes, minipipes and overhead sections of our network**, that are present throughout the Italian territory to connect the user or equipment stations to upstream delivery nodes.
