

# ***INFRASTRUCTURAL SERVICES***

**Conveyance Infrastructures**

Use our infrastructures for your network

The service allows the Operator to acquire the indefeasible rights of use (IRU) on the secondary network conveyance infrastructures at the conditions envisaged by the Reference Offer currently in force.

The Offer of Access does not only regulate the Conveyance Infrastructures, but all the secondary access networks that envisage transferring the IRU (Indefeasible Right of Use) to the Operator, with a scalable time frame of 5/10/15/20 years of:

- Pipes / Minipipes for Local Deployment Infrastructure Section;
- Minipipe for Conveyance Section;
- Cable positions for Overhead Deployment Infrastructure Section, either on pylons or on the façade on a suspension cable.

### **WHO IT IS INTENDED FOR**

The service is dedicated to the Operators interested in developing new ultra broadband communication networks.

### **CHARACTERISTICS OF THE SERVICE**

FiberCop offers access to the Conveyance Infrastructures, throughout the domestic territory.

The Operator may use the FiberCop local access network, or complete its own one, without having to create new infrastructures, with the advantage of obtaining an important reduction of the time and costs necessary for excavating.

### **TECHNICAL INFORMATION**

The service involves the IRU leasing of a minipipe in the Conveyance Infrastructure (infrastructure section that allows entry to the private property from the last point of presence on public land).

The service is available for the conveyance sections already fitted with minipipes (available conveyance sections) that connect the inside of a building (private area) with the first FiberCop manhole or chamber of the local access network (public area), in proximity to the building itself.

The Operator can use the minipipe to lay its own optical cable that connects its own local optical access network to the systems located inside the building.

The service is offered inclusive of routine maintenance that guarantees the upkeep and efficiency of the infrastructure. Extraordinary maintenance is not included in the service and, if necessary, is managed by project.

### **SUBSCRIPTION METHOD**

The infrastructural services are supplied by FiberCop, on an individual project basis and the Operator must send FiberCop a prior request for a Feasibility Study (SdF) for any specific need.

For further details on the service and the subscription method, please see the **Reference Offer** on our website [www.fibercop.it](http://www.fibercop.it).

### **REGULATORY CONDITIONS**

The serviced is aimed at the Operators with an individual licence, or general authorisation in terms of telecommunications networks and services for public use as envisaged by the Electronic Communications Code. The Offer related to the Overhead Infrastructures service is regulated by and thus subject to approval, in all its aspects, by the Communications Regulatory Authority (AGCom).

### **PRICES**

The prices of the service are established within the Reference Offer, along with the methods of providing the service.

The fee structure of the Deployment Infrastructures for developing FTTx networks is broken down into:

- IRU amount (5, 10, 15 or 20 years) for each metre of minipipe transferred on infrastructure;
- contribution for the Feasibility Study;
- contribution for updating maps of the station area;
- contribution for creating the delivery point inside the building (only applied for conveyance);
- any contributions for extraordinary corrective maintenance.

For all the details on pricing please consult the **Reference Offer** in force.

### **TO BEGIN WITH**

For further information, write to us at the email address [sales@fibercop.it](mailto:sales@fibercop.it) or fill in the **form** in the [Partners](#) section of our website.

You will be contacted by the FiberCop Sales Team who will guide you in the subscription procedure.
